Test Your Water

A Private Well Owner's Checklist

Safe drinking water matters. Test your well water regularly for peace of mind and a healthy home. Use our checklist to stay on track with the recommended testing schedule.

You should also test your well if:

- There are known problems with well water in your area.
- Anyone in your household has an unexplained illness.
- You notice a change in water quality (taste, color, odor).
- You experience problems near your well (flooding, wildfire, land disturbances).

✓	Contaminant	Date Tested
New Wells		
	Arsenic	
	Bacteria (Total Coliform)	
	Fluoride	
	Lead	
	Nitrates	
	Total Dissolved Solids	
	Uranium	
Every Year		
	Bacteria (Total Coliform)	
	Nitrates	
Every 5 Years		
	Arsenic	
	Fluoride	
	Uranium	

Private labs offer water testing for a fee. To find the closest certified lab to test your water, visit the website below:
